§ 151-5. Prohibited discharges.

No person shall discharge directly or indirectly into the borough's public sanitary sewer system any wastes or wastewater which contains any of the following:

- A. Oil and grease.
- (1) Oil and grease from industrial facilities in concentrations or amounts violating pretreatment standards. This includes petroleum-based hydrocarbons as determined by silica gel absorption.
 - (2) Wastewater from commercial and/or industrial facilities containing floatable fats, wax, grease or oil.
 - (3) Total fats, wax, grease or oil concentration of more than 100 milligrams per liter, whether emulsified or not, or containing substances which may solidify or become viscous at temperatures between thirty-two degrees and one hundred fifty degrees Fahrenheit (32° and 150° F.) [zero degrees and sixty-five degrees Celsius (0° and 65° C.)] at the point of discharge into the treatment works.
- B. Explosive and/or flammable mixtures. Liquids, solids or gases which, by reason of their nature or quantity, are or may be sufficient, either alone or by interaction with other substances, to cause fire or explosion or to be injurious in any other way to the treatment works or to the operation of the works. Such materials include but are not limited to gasoline, kerosene, naphtha, benzene, toluene, xylene, ethers, alcohols, ketones, aldehydes, peroxides, chlorates, perchlorates, bromates, carbides, hydrides and sulfides.
- C. Noxious material. Noxious material or pollutants which, either singly or by interaction with other wastes, are malodorous, are capable of creating a public nuisance or hazard to life or health or are present in sufficient concentrations to prevent entry into the treatment works for its maintenance and repair.
- D. Improperly shredded garbage. Garbage that has not been ground or committed to such a degree that all particles will be floating or carried freely in suspension under flow conditions normally prevailing in the treatment works with no particle greater than one-half (1/2) inch in any dimension. The discharge of any improperly shredded garbage is prohibited. This prohibition does not apply to the use of garbage disposal units in private dwellings whose only discharge is domestic wastewater.
- E. Radioactive wastes. Prohibited except in conformance with N.J.A.C. 7:28-11.2 (Disposal of Radioactive Materials Disposal by Release Into Sanitary Sewerage Systems).
- F. Solid or viscous wastes. Solid or viscous wastes which will or may cause obstruction to the flow in a sewer or otherwise interfere with the proper operation of the treatment works. Prohibited materials include but are not limited to grease, improperly shredded garbage, animal guts or tissues, diseased human organs or tissue fluids, paunch manure, bones, hair, hides or fleshings, entrails, whole blood, feathers, ashes, cinders, sand, spent lime, stone or marble dust, metal, glass, straw, shavings, grass clippings, rags, spent grains, spent hops, wastepaper, wood, plastic, tar, asphalt residues, residues from refining or processing of fuel or lubricating oil and similar substances.
- G. Excessive discharge. Wastewater at a flow rate that exceeds for any time period longer than 15 minutes more than five times the average daily flow rate of the industrial user during normal operation or containing such concentrations or quantities of pollutants that, in the judgment of the Superintendent, would cause a treatment upset, interference or loss of treatment efficiency.
- H. Toxic discharge. Waters or wastes containing objectionable or toxic substances in sufficient quantity, either singly or by interaction with the other pollutants, to result in pass-through, to cause interference with the treatment works plant, to constitute a hazard to humans or animals or to exceed standards promulgated by the Environmental Protection Agency pursuant to Section 307(2) of the Act,¹ or the New Jersey Department of Environmental Protection and Energy, pursuant to Section 4 of the State Act.²
- I. Stormwater. Discharge of stormwater, including surface and ground water from sump pumps and cellar drains, into the treatment works from any source.
- J. Discolored materials. Wastes with a color higher than 500 units as per platinum cobalt standard.
- K. Corrosive wastes. Any waste which will cause corrosion or deterioration to the treatment works. All wastes discharged to the treatment works must not have a pH value lower than five point five (5.5) or greater than nine point five (9.5) standard units, unless the treatment works is specifically designed to accommodate such discharges. Prohibited materials include but are not limited to concentrated acids, alkalis, sulfides, chloride and fluoride

compounds and substances which will react with water to form acidic or alkaline products which have a pH value that does not fall within the range stated herein.

They shall be of substantial construction, watertight and equipped with easily removable covers which, when bolted in place, shall be gastight and watertight.
- C. Where installed, all grease, oil and sand interceptors shall be maintained by the owner, at his expense, in continuously efficient operation at all times.
